

Proserv Training Overview

proserv

Proserv have over 40 years of expertise in engineering and innovating solutions for the energy sector. We are now offering a unique and comprehensive range of trainings to provide you with the knowledge & tools to drive their business forward.

Our range of training services are briefly outlined on the following pages, however if you require further information please email us or check our website for regional contact details: www.proserv.com

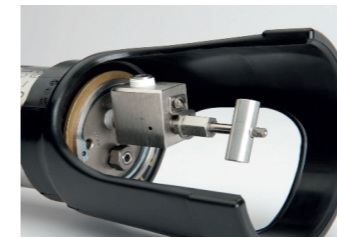

Surface Production Equipment

Proserv offers Surface Production Equipment Training which mainly focuses on Wellhead Control Panels and Hydraulic Emergency Shutdown Systems. The training aims to enhance technical awareness associated with application and also to help achieve optimized engineering.

Chemical Injection System

Proserv offer Chemical Injection Systems Training to give you the basic understanding of the key components, various design aspects of the equipment involved, operation and performance of the various types of Chemical Injection Packages.

Oil and Gas Sampling

Proserv offer Oil and Gas Sampling Training to enhance the importance of using sampling during the exploration and production phase. This training aims to give you an understanding on sampling cylinder selection criteria for various applications and operations and to also understand the handling and features of Downhole Samplers and Manual / Automatic Sampling Systems.

Autoclave Engineering

Proserv offer Cone and Thread Connection and Safety Training to enhance and improve users knowledge on one of the most reliable seal joining techniques for valves, fittings and tubing over 1000 bars (15000 PSI)

Lean Methodology

Proserv offer introductory Lean training course which enables delegates to understand the benefits of Lean Methodology implementation for their organisation. This course also details the key Lean principles, the various tools and techniques and the best methods used to approach implementation.

Hazard Awareness - Handling High Pressure

Proserv offer a basic awareness training course on Hazard awareness and Risk Assessment while handling Pressure Test related activities. This training course primarily focuses on managing the risk associated with High Pressure activities. This course will provide participants with an understanding of the nature and consequences of damage and leakage during High Pressure testing. Participants will also learn about Hazard identification and Risk assessment methodology.

Project Specific Training

Proserv also offer Project Specific Training for clients looking for specific training based on an existing project. This can benefit the client in relating specifically to work which will be carried out in the future and will ensure that all personnel are highly skilled in operating a particular product or when carrying out maintenance or service.

Bespoke Training

Proserv can also provide bespoke training to clients upon request. We have a wide range of product and service offerings for the entire oilfield cycle including marine, subsea, drilling and production domains and we can develop tailor-made training based on this.
